

## Authenti-Mark™

### UV Fluorescing Security Marking Resin Thermal Transfer Ribbons

Authenti-Mark™ security marking resin thermal transfer ribbons are integrated with security features for the purpose of brand protection, diversion control, and counterfeit prevention. These unique resin ribbons from ITW Thermal Films are:

- Extremely durable, and once applied, extremely difficult to remove
- Counterfeit prevention features that can be applied to product labels, tags and tickets
- Ideal for security labeling applications, as overt, covert and combination security features can be used
- A “drop-in” solution
- Easily implemented, can use your existing printing equipment
- A secure solution that allows you to maintain security integrity by applying in-house

#### RIBBON PROPERTIES AND FEATURES

- UV fluorescing inks
- Resin formulation produces extremely durable printed images
- Authenti-Mark™ ribbons print clear or black, and look like a standard thermal transfer ribbon until exposed to UV light where they will glow red or blue
- Other colors available upon request
